Editor's note: Craig is a New Zealander, so please excuse the unconventional (at least to us here in the U.S.) spellings in this document.

Also, please see our [disclaimer](#) as well as the one [below](#).

Excluding contributions attributed to specific individuals, all material is copyrighted to the author and all rights are reserved. This work may be copied and distributed freely as long as the entire text and all disclaimers and copyright notices remain intact, unless my prior permission is obtained. This FAQ may not be distributed for financial gain, included in any commercial collections or compilations or included as any part of a Web site without the permission of the author.

Thanks to Richard DeCastro, Diana and Alan Hagan and Pat Turner for comments and suggestions.

Any constructive comments and debate are welcome. I welcome correction in any errors of fact. I apologize for any errors of grammar or spelling they are entirely mine. I've tried to avoid detailing specific managements for various conditions as I do not consider this to be an appropriate forum. I will, however, respond to specific questions, with suitable references on request.

Disclaimer: The author, Captain Dave, Captain Dave Inc., the webmaster, host and others associated with this site accept no responsibility for the use or misuse of this information. The practice of medicine is something that should only be practiced by trained professionals. If you start administering medical or surgical treatments without the appropriate skills you will kill someone. Even in emergency situations, often no action is better than uninformed and untrained action. Any practice of survival medicine should be backed up with appropriate training. This information is offered as my personal opinion and should not be taken to represent a professional opinion or to reflect any views widely held from the medical community.

12. [Quotes and final comments](#)

Before I start, the most important thing about medicine, survival or otherwise, is WASH YOUR HANDS.
